

18. Correct. The answer is true.

$$\begin{aligned} \text{Meters}^2 &= \frac{\frac{kWh}{\text{Hour}} \times \frac{\text{Hours}}{\text{Day}}}{\frac{\text{Useable } W}{W} \times \frac{kW}{\text{Meters}^2} \times \frac{\text{HoursSun}}{\text{Day}}} \\ &= \frac{1.8 \times 24}{0.2 \times 1 \times 6} = 36 \end{aligned}$$
